

iCAM WIRELESS CLOUD PRINT

Library visitors are increasingly demanding the ability to print direct from their own devices rather than having to rely on using a library PC.

The iCAM Wireless Cloud Print solution gives library users this seamless, easy to use facility, with the flexibility to print whilst in the library building or print from home and collect prints later from a local library. There are no requirements for separate log-ins, codes or vouchers for collecting print.

Compatible with Android, Apple and Windows phones, tablets and laptops, the solution allows printing of a range of document formats, web pages, and web-based email.

iCAM Wireless Cloud Print integrates seamlessly with our Printer Control solution, meaning library staff can manage all types of print jobs in one user-friendly interface. Documents are sent to the iCAM Administration print queue, ready for release by staff when the user comes to collect them. The iCAM print solution allows the user's document to be manipulated if required, including changing from grey scale print to colour and altering the number of copies / pages, meaning users only need to pay for and receive the pages they actually require, regardless of what was initially selected and sent for printing.

Self-service options are available when the solution is installed in conjunction with iCAM iKiosk software, enabling library members to self-serve at an existing third party kiosk to pay for and release their own print jobs without any staff involvement.

iCAM Wireless Cloud Print also supports scanning and copying of documents using the 'Tap to Scan' function on an Android device or the 'Scan' option in Notes on Apple devices. Once the document has been scanned and saved it can then be sent to print via Wireless Cloud Print.

iCAM Wireless Cloud Print is the ideal solution to offer convenient printing for your public users from wherever suits them, and provides libraries with the opportunity to increase foot fall and new income streams.

Key Features

- Public users can print from their own devices when in the library
- Public users can print from anywhere over the internet to their library of choice
- Supports printing from Microsoft Windows, MacOS, Android and IOS devices
- Provides quick and easy driverless printing for all public users
- Compatible with library's existing printer hardware - no new printer hardware required
- Seamlessly compatible with iCAM Printer Control for a complete print management solution
- Simple and intuitive for public users - no need to install apps
- Facilitates payment by cash or card depending on library's current payment options
- Payment is at point of collection - no requirement for pre-payment, or setting up a separate payment account
- Works with the library's existing Wi-Fi solution

Benefits

- Provides enhanced services for library users and the local community
- Encourages membership, more visits and greater usage within your libraries
- Maximises on the investment in existing printers
- Generates a new income stream for public printing
- Delivers a printing solution that library visitors are increasingly demanding

As an added benefit for libraries, our public-facing website **www.PrintMyDocuments.com** promotes all sites with iCAM Wireless Cloud Print installed and offers a search function for members of the public looking to print their documents at a library from their own device.
